Ankara / Turkey

Computer Engineering senior at TED University with hands-on experience in C#, C++, and Python. I specialize in building end-to-end management systems, seamlessly connecting backend logic with functional user interfaces. Bringing a strong foundation in OOP, database management, and Agile methodologies to develop reliable, full-stack solutions.

Experience

Game Developer Intern

07.2025 – 08.2025

FRANTIC GAMES

- Architected modular systems using C# and Unity, implementing Scriptable Objects for scalable data management and decoupled code structure.
- Designed complex AI pathfinding and state-machine logic for dynamic object behaviors.
- Developed end-to-end game loop logic and UI/HUD systems, ensuring seamless user experience and performance optimization.

Software Programmer Intern

06.2024 – 08.2024

INFODIF YAZILIM VE BİLİŞİM TEKNOLOJİLERİ

- Developed high-performance back-end modules using Python and C++ for real-time object detection and data processing.
- Built a custom Named Entity Recognition (NER) tool using SpaCy to automate and classify unstructured text data.
- Engineered optimized logical solvers (Chess/Sudoku) using C++, focusing on algorithmic complexity and memory management.

Education

Computer Engineering

2022-2026 (Expected)

TED University

- Bachelor of Science in Computer Engineering (English)
- Key Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Software Engineering, Computer Networks.
- Details: 50% Admission Scholarship. Full English curriculum.

Languages

English	C1-C2 Advanced Level Professional Working Proficiency
Turkish	Native

Soft Skills

- Analytical Thinking: Result-oriented persona with a focus on problem-solving.
- Rapid Learning: Ability to quickly adapt to new technologies and frameworks.
- Effective Communication: Strong collaboration skills within cross-functional teams.
- Detailed & Organized: High attention to detail in code documentation and system modeling.
- Pragmatic Approach: Focusing on delivering working, practical solutions rather than over-engineering.
- Continuous Improvement: Actively seeking constructive feedback through code reviews to refine skills.
- Time Management: Efficiently prioritizing tasks to meet project deadlines in fast-paced environments.

Interests

- ML and AI: Closely following developments in Generative AI and Large Language Models.
- Open Source: Contributing to and exploring community-driven software projects.
- Strategic Games: Enhancing logical thinking through chess and complex strategy simulations.

Certificates

- Software Engineering: Implementation and Testing
- Software Engineering: Software Design and Project Management
- Software Engineering: Modeling Software Systems using UML

Projects

Leta-Takip

Developed a complete desktop application to help a business efficiently track client sessions and manage financial records. I designed a secure SQLite database to carefully organize and protect sensitive client data. Using Python, I automated recurring appointment schedules and payment reports, which significantly reduced manual data entry errors and improved overall workflow.

High-Performance Algorithmic Solvers (C++)

Developed highly efficient C++ programs to quickly solve complex logic puzzles like Chess and Sudoku. I focused heavily on memory optimization and smart search methods to speed up the problem-solving process. Ultimately, this project required writing clean, low-level code that delivers high-speed performance while using very minimal system memory.

NLP-Based Named Entity Recognition (NER) Tool

Built a custom Natural Language Processing (NLP) tool using SpaCy to automatically extract and organize useful information from raw text. I trained AI models to recognize key details, making it possible to quickly categorize large amounts of data. Ultimately, this project replaced slow, manual data processing with a fast, automated AI workflow.

Modular System Architecture & System Design (C#)

Built a highly organized game system in Unity (C#) that is easy to manage and expand. By using Scriptable Objects, I successfully separated the game data from the core code to prevent messy, tangled scripts. I also programmed smart AI characters using pathfinding and state machines. Ultimately, applying clean code principles helped me create a solid, bug-free foundation for the entire project.

Professional Skills

- Full-Stack Software Development: End-to-end application design and system logic implementation.
- System Architecture & Design: Building modular and scalable architectures using Design Patterns and UML.Agile and Scrum Methodologies
- Database Management: Designing relational database schemas and managing data integrity with SQL/SQLite.
- Algorithmic Optimization: Engineering high-performance logical solvers and optimizing complex code structures.
- AI & Data Processing: Implementing NLP pipelines (SpaCy) and Computer Vision modules for data classification.
- Agile Methodologies: Experience in iterative development cycles and version control via Git/GitHub.
- API Design & Integration: Knowledge of creating and consuming RESTful services to connect frontend components with backend logic.
- Data Integrity & Normalization: Applying RDBMS principles to ensure consistent and non-redundant data storage in application databases.
- UI/UX Implementation: Translating business requirements into functional and user-centric desktop/game interfaces.
- Software Lifecycle Management: Hands-on experience in the full cycle of development, from requirement analysis to testing and deployment

Technical & Tool Assets

Back-End / AI

- SpaCy (NLP)
- OpenCV (CV)
- .NET Foundations
- Data Structures

Coding

- C#
- Python
- C++
- Java
- SQL
- HTML/CSS

Database

- SQLite
- Relational Database Design
- CRUD Operations

Engineering

- UML Modeling
- OOP
- Software Design Patterns
- Agile/Scrum

DevOps / Tools

- Git,
- GitHub,
- Visual Studio,
- JetBrains Rider,
- Figma
